design for you

Unique jewel on the sea. Each single detail is the result of accurate study and research of innovative ideas to optimize performance, security, design and comfort. Completely custom made the yacht reflects the style and the desires of its owner.

design for future

New concept of living the sea: this yacht is able to reduce the impact on the environment (in respect of ecological way of cruising) and in harmony with the sea. The vertical window, a distinctive sign of Seanest Yachts, donates great space to the lounge and enormous sun deck and it guarantees the maximum visibility even in heavy seas.

design for privacy

The owner suite is placed on main deck with large windows all around the king size bed and with an exclusive terrace on the sea which gives continuity between external and internal space.
